DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Vis U.S. Patent 4,345,380 in view of Shimizu et al. U.S. Patent 4,973,957.

Regarding claim 1, Vis teaches an assembly that identifies the existence of a gap and transmits a signal that is indicative of the existence of said gap (column 2 lines 15-23).

However, Vis does not specifically mention said signal transmission is a wireless transmission.

Shimizu et al. teahes a data collecting system, wherein wireless data transmission is employed (Figure 1 indicates wireless transmission).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide wireless transmission to the system disclosed by Vis, as evidenced by Shimizu et al., so that collected data can be wirelessly transmitted to a remote location.

Page 1

Page 2

Application/Control Number: 09/683,145

Art Unit: 2635

3. Claims 2, 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vis U.S. Patent 4,345,380 in view of Shimizu et al. U.S. Patent 4,973,957 and in further view of Shigyo U.S. Patent 6,115,930.

Regarding claims 2, 5 and 6, as mentioned above, Vis in view of Shimizu et al. teaches an assembly for identifying the existence of a gap as claimed in claim 1.

However, Vis in view of Shigyo does not specifically teach a force measurement portion.

Shigyo, in the same field of endeavor, teaches a gap measurement assembly, which further includes a strain gauge as a force measurement portion (column 11 lines 19-34) for measuring the existing gap.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide a force measurement device to the assembly disclosed by Vis, as evidenced by Shigyo, so the existing gap can be measured.

4. Claims 3, 4, 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vis U.S. Patent 4,345,380 in view of Shimizu et al. U.S. Patent 4,973,957 and in further view of Carter U.S. Patent 6,529,164.

Regarding claims 3, 4, 7 and 8, Vis in view of Shimizu et al. teaches an assembly for identify the existence of a gap and wirelessly transmit a signal that is indicative of the existence of a gap. However, Vis in view of Shimizu et al. does not teach a signal strength measurement portion.

One skilled in the art would recognize that signal strength measurement has been commonly provided in wireless telemetry systems to achieve effective data transmission, as evidenced by Carter.

Carter teaches a wireless telemetry system, which includes a signal strength measurement to achieve optimal data transmission (column 5 lines 11-28).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide a signal strength measurement portion to the assembly disclosed by Vis in view of Shimizu et al., as evidenced by Carter, in order to achieve optimal data transmission.

Regarding claim 9, Vis also teaches a display (Figure 1, unit 65) for displaying said gap measurement.

Allowable Subject Matter

5. Claims 10-18 are allowed.

Regarding claim 10, the prior arts of record fail to teach or disclose a vehicular gap sensing assembly comprising a housing, which is adapted to be placed upon a first portion of a vehicle and including a force measurement assembly having an exposed surface and a member which is pivotally coupled to said housing and which is movable from a first position to a second position in which said member contacts said exposed surface, said force measurement assembly wirelessly transmitting a signal when said member contacts said surface; and a receiver which is in communication with said force

Page 3

Page 4

measurement assembly and which receives said signal and creates a display based upon said received signal.

Regarding claim 13, the prior arts of record fail to teach or disclose a method of ascertaining the existence of a gap between two portions of a vehicle as claimed in claim 13, said method comprises the steps of providing a gap measurement assembly; placing the gap measurement assembly on a first of the two portions; causing a second of the two portions to come into close proximity to the first of the two portions; creating a signal as said second of said two portions comes into close proximity with said first of said two portions; using said signal to ascertain the existence of a gap and the size of a gap; providing a data acquisition assembly; creating a second signal which is indicative of the existence and the size of a gap; and wirelessly transmitting the second signal to the data acquisition assembly.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hung Q Dang whose telephone number is (571) 272-3069. The examiner can normally be reached on 9:30AM-6PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Horabik can be reached on (571) 272-3068. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
